Deliver in-house cloud services from the security of your network.

Recent access to information policy changes in many server-based foreign countries have brought cloud-based privacy and security issues to the forefront. As a result, more and more organization will not move their data to the cloud and those who do, plan on keeping more sensitive data in-house.

FileWay creates a cloud-like remote file-sharing environment using your own network (servers) thereby addressing the needs of organizations like yours who want to maintain "in-house" control of all or part of your data.

This on-premise secure remote file access solution provides your web-enabled users with access to their documents, no matter where they are located and what web-enabled device they are using.

An affordable solution that will grow with you.

FileWay is licensed for concurrent user connections and not the total number of users registered. With this type of licensing model, your system administrator can provide FileWay access to as many users in you organization as you permit but only allowing a certain number of these users to be connected to your service at the same time.

Concurrent user connection licensing (available as perpetual or annual subscriptions) is ideal for environments required to provide remote file access capabilities within limited budgets. It is equally cost-effective for environments with limited number of users.

As demand fluctuates over time, your administrator can easily upgrade or downgrade your license size to accommodate those changes.

fileway™

Delivers all the functionality of a desktop using any remote device.

Everything that a user can do accessing their documents on their own desktop systems can be done using FileWay.

All the standard file and folder management functions are supported; creating, renaming, deleting, copying and moving.

Users can also upload and download documents from and to any web-enabled device they are using (mobile or desktop).

They can view the content of documents online without downloading using FileWay's powerful rendering engine.

FileWay enables the sharing of very large files that traditionally are not supported due to file size restrictions on many e-mail servers .

Your network administrator always has full security control over which users have access to which specific features.

Unauthorized access to your files and folders is eliminated since documents remain within your "in-house" cloud.

AttachLink is one of FileWay's most powerful collaboration features. It allows users to send, receive or share document that have secure time expiry links attached to them. Once the user-specified deadline has expired, those documents are no longer available.

Extensive installed base of satisfied global clients.

FileWay is used by over 2 million users in 30 countries around the world. Our customers include, corporations, educational institutions and small local governments including: Griffith University (Australia), Brown University, (USA), University of Fraser Valley (Canada), The City of Frankfurt (Germany) and the Government of Arizona (USA).

Request your 30 day FREE trial.

It is easy. Visit our website, provide a valid corporate email address and we will email you our download links. **Free technical support** is also provided during your trial period.
